Ostrander Point Wind Energy Park

Visual Impact Assessment

- A Visual Impact Assessment with photorealistic simulations has been done to understand and illustrate the extent of potential visual change that the proposed Project will have on the surrounding landscape.

- The visual simulations are photorealistic depictions of proposed wind turbines within the landscape.

- The simulations are an important communication tool because they illustrate the existing conditions as well as the potential visual change for the proposed wind energy project in an accurate and realistic way, long before construction occurs.

- The simulations represent a number of different vantage points in order to illustrate a wide range of views towards the Project.

- Based on feedback from the first Public Open House and stakeholder comments, the visual impact assessment has been improved and an additional recommended vantage point was added.
