

Ostrander Point Wind Energy Park

Transmission Lines

- Electricity produced by the turbines will be connected to the proposed Ostrander Point Substation via an on-site collection system of 13.5 kV lines - further work will be conducted to determine whether these lines will be located above or buried below ground.
- The 44 kV transmission line proposed to connect the Project's substation (to be located near the turbines) to the Milford Distribution Station is currently proposed as a road pole line, similar to the existing distribution lines within the area.
