- "To date, no peer reviewed scientific journal articles demonstrate a causal link between people living in proximity to modern wind turbines, the noise (audible, low frequency noise, or infrasound) they emit and resulting physiological health effects." Source: Knopper&Ollson review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf
- "... there is no scientific evidence that noise at levels created by wind turbines could cause health problems other than annoyance..." Source: Eja Pedersen 2003 Review http://www.naturvardsverket.se/Documents/publikationer/620-5308-6.pdf
- "None of the... evidence reviewed suggests an association between noise from wind turbines and pain and stiffness, diabetes, high blood pressure, tinnitus, hearing impairment, cardiovascular disease, and headache/migraine." Source: Massachusetts review http://www.mass.gov/dep/energy/wind/turbine_impact_study.pdf

- "...there are no evidences that noise from wind turbines could cause cardiovascular and psycho-physiological effects." Source: Eja Pedersen 2003 Review http://www.naturvardsverket.se/Documents/publikationer/620-5308-6.pdf
- "...there was no evidence that environmental noise was related to raised blood pressure..." Source: Ad Hoc Expert Group on Noise and Health http://www.hpa.org.uk/webc/HPAwebFile/HPAweb C/1279888026747
- "The health impact of the noise created by wind turbines has been studied and debated for decades with no definitive evidence supporting harm to the human ear." Source: Chatham-Kent Public Health Unit http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf
- "The electromagnetic fields produced by the generation and export of electricity from a wind farm do not pose a threat to public health..." Source: NHMRC 2010
 http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf
- "... no consistent associations were found between wind turbine noise exposure and symptom reporting, e.g. chronic disease, headaches, tinnitus and undue tiredness."
 Source: Bolin et al 2011 Review <a href="http://iopscience.iop.org/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103/pdf
- "... low level frequency noise or infrasound emitted by wind turbines is minimal and of
 no consequence... Further, numerous reports have concluded that there is no evidence
 of health effects arising from infrasound or low frequency noise generated by wind
 turbines." Source: NHMRC 2010
 http://www.nhmrc.gov.au/ files nhmrc/publications/attachments/new0048 evidence
 review wind turbines and health.pdf
- "... renewable energy generation is associated with few adverse health effects compared with the well documented health burdens of polluting forms of electricity generation..." Source: NHMRC 2010
 http://www.nhmrc.gov.au/ files nhmrc/publications/attachments/new0048 evidence review wind turbines and health.pdf
- "Although opposition to wind farms on aesthetic grounds is a legitimate point of view, opposition to wind farms on the basis of potential adverse health consequences is not justified by the evidence." Source: Chatham-Kent Public Health Unit http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf
- "What is apparent is that numerous websites have been constructed by individuals or
 groups to support or oppose the development of wind turbine projects, or media sites
 reporting on the debate. Often these websites state the perceived impacts on, or
 benefits to, human health to support the position of the individual or group hosting the

website. The majority of information posted on these websites cannot be traced back to a scientific, peer-reviewed source and is typically anecdotal in nature. In some cases, the information contained on and propagated by internet websites and the media is not supported, or is even refuted, by scientific research. This serves to spread misconceptions about the potential impacts of wind energy on human health..." Source: Knopper&Ollson review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf

Annoyance

- "... wind turbine noise is comparatively lower than road traffic, trains, construction
 activities, and industrial noise." Source: Chatham-Kent Public Health Unit
 http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf
- "The perception of noise depends in part on the individual on a person's hearing acuity and upon his or her subjective tolerance for or dislike of a particular type of noise. For example, a persistent "whoosh" might be a soothing sound to some people even as it annoys others." Source: NRC 2007
 http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf
- "... some people might find [wind turbine noise annoying. It has been suggested that
 annoyance may be a reaction to the characteristic "swishing" or fluctuating nature of
 wind turbine sound rather than to the intensity of sound." Source: Ontario CMOH
 Report
 http://www.health.gov.on.ca/en/public/publications/ministry_reports/wind_turbine/wind_turbine.pdf
- "... being annoyed can lead to increasing feelings of powerlessness and frustration, which is widely believed to be at least potentially associated with adverse health effects over the longer term." Source: Ad Hoc Expert Group on Noise and Health http://www.hpa.org.uk/webc/HPAwebFile/HPAweb C/1279888026747
- "Wind turbine annoyance has been statistically associated with wind turbine noise, but found to be more strongly related to visual impact, attitude to wind turbines and sensitivity to noise." Source: Knopper&Ollson review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf
- "... self reported health effects like feeling tense, stressed, and irritable, were
 associated with noise annoyance and not to noise itself..." Source: Knopper&Ollson
 review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf
- "... many of the self reported health effects are associated with numerous issues, many of which can be attributed to anxiety and annoyance." Source: Knopper&Ollson review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf

- "To date, no peer reviewed articles demonstrate a direct causal link between people living in proximity to modern wind turbines, the noise they emit and resulting physiological health effects. If anything, reported health effects are likely attributed to a number of environmental stressors that result in an annoyed/stressed state in a segment of the population." Source: Knopper&Ollson review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf
- "... some community studies are biased towards over-reporting of symptoms because of anexplicit link between...noise and symptoms in the questions inviting people to remember and report more symptoms because of concern about noise." Source: Ad Hoc Expert Group on Noise and Health http://www.hpa.org.uk/webc/HPAwebFile/HPAweb C/1279888026747
- "... it is probable that some persons will inevitably exhibit negative responses to turbine noise wherever and whenever it is audible, no matter what the noise level." Source: Fiumicelli review Fiumicelli article abstract
- "The major source of uncertainty in our assessment is related to the subjective nature of response to sound, and variability in how people perceive, respond to, and cope with sound." Source: Oregon review
 http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf
- "... sleep difficulties, as well as feelings of uneasiness, associated with noise annoyance could be an effect of the exposure to noise, although it could just as well be that respondents with sleeping difficulties more easily appraised the noise as annoying."
 Source: NHMRC 2010
 http://www.nhmrc.gov.au/ files nhmrc/publications/attachments/new0048 evidence review wind turbines and health.pdf
- "Even noise that falls within known safety limits is subjective to the recipient and will be received and subsequently perceived positively or negatively." Source: Chatham-Kent Public Health Unit http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf
- "... annoyance was strongly correlated with a negative attitude toward the visual impact
 of wind turbines on the landscape..." Source: NHMRC 2010
 http://www.nhmrc.gov.au/ files nhmrc/publications/attachments/new0048 evidence
 review wind turbines and health.pdf
- "Respondents tended to report more annoyance when they also noted a negative effect on landscape, and ability to see the turbines was strongly related to the probability of annoyance." Source: Minnesota Health Dept 2009 http://www.health.state.mn.us/divs/eh/hazardous/topics/windturbines.pdf

- "[It is proposed that annoyance is not a direct health effect but an indication that a
 person's capacity to cope is under threat. The person has to resolve the threat or their
 coping capacity is undermined, leading to stress related health effects... Some people
 are very annoyed at quite low levels of noise, whilst other are not annoyed by high
 levels." Source: NHMRC 2010
 http://www.nhmrc.gov.au/ files nhmrc/publications/attachments/new0048 evidence
 review wind turbines and health.pdf
- "Further, sounds, such as repetitive but low intensity noise, can evoke different responses from individuals... Some people can dismiss and ignore the signal, while for others, the signal will grow and become more apparent and unpleasant over time...
 These reactions may have little relationship to will or intent, and more to do with previous exposure history and personality." Source: Minnesota Health Dept 2009 http://www.health.state.mn.us/divs/eh/hazardous/topics/windturbines.pdf
- "Stress and annoyance from noise often do not correlate with loudness. This may suggest [that other factors impact an individual's reaction to noise... individuals with an interest in a project and individuals who have some control over an environmental noise are less likely to find a noise annoying or stressful." Source: Minnesota Health Dept 2009 http://www.health.state.mn.us/divs/eh/hazardous/topics/windturbines.pdf
- "There is a possibility of learned aversion to low frequency noise, leading to annoyance and stress..." Source: Leventhall 2005 review
 http://www.noiseandhealth.org/article.asp?issn=14631741;year=2004;volume=6;issue=23;spage=59;epage=72;aulast=Leventhall
- "Noise produced by wind turbines generally is not a major concern for humans beyond
 a half mile or so because various measures to reduce noise have been implemented in
 the design of modern turbines." Source: NRC 2007
 http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf
- "Noise... levels from an onshore wind project are typically in the 35-45 dB(A) range at a distance of about 300 meters... These are relatively low noise or sound-pressure levels compared with other common sources such as a busy office (~60 dB(A)), and with nighttime ambient noise levels in the countryside (~20-40 dB(A))." Source: NRC 2007 http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf
- "Complaints about low frequency noise come from a small number of people but the
 degree of distress can be quite high. There is no firm evidence that exposure to this
 type of sound causes damage to health, in the physical sense, but some people are
 certainly very sensitive to it." Source: Ad Hoc Expert Group on Noise and Health
 http://www.hpa.org.uk/webc/HPAwebFile/HPAweb C/1279888026747
- "... there is the theoretical possibility that annoyance may lead to stress responses and then to illness. If there is no annoyance then there can be no mechanism for any increase in stress hormones by this pathway... if stress-related adverse health effects are mediated solely through annoyance then any mitigation plan which reduces

annoyance would be equally effective in reducing any consequent adverse health effects. It would make no difference whether annoyance reduction was achieved through actual reductions in sound levels, or by changes in attitude brought about by some other means." Source: Ad Hoc Expert Group on Noise and Health http://www.hpa.org.uk/webc/HPAwebFile/HPAweb C/1279888026747

<u>Infrasound</u>

- "Claims that infrasound from wind turbines directly impacts the vestibular system have not been demonstrated scientifically... evidence shows that the infrasound levels near wind turbines cannot impact the vestibular system." http://www.mass.gov/dep/public/press/0112wind.htm
- "There is no evidence that infrasound ... [from wind turbines ... contributes to perceived annoyance or other health effects." Source: Bolin et al 2011 Review http://iopscience.iop.org/1748-9326/6/3/035103/pdf/1748-9326/6/3/035103.pdf
- "There is no consistent evidence of any physiological or behavioural effect of acute exposure to infrasound in humans." Source: UK HPA Report http://www.hpa.org.uk/webc/HPAwebFile/HPAweb C/1265028759369
- "... self reported health effects of people living near wind turbines are more likely attributed to physical manifestation from an annoyed state than from infrasound."
 Source: Knopper&Ollson review http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf
- "... infrasound from current generation upwind model turbines [is well below the
 pressure sound levels at which known health effects occur. Further, there is no
 scientific evidence to date that vibration from low frequency wind turbine noise causes
 adverse health effects." Source: Ontario CMOH Report
 http://www.health.gov.on.ca/en/public/publications/ministry_reports/wind_turbine/w_ind_turbine.pdf
- "It would appear... that infrasound alone is hardly responsible for the complaints... from people living up to two km from the large downwind turbines." Source: Jakobsen 2005 review http://multi-science.metapress.com/content/w6r4226247q6p416/
- "From a critical survey of all known published measurement results of infrasoundfrom wind turbines it is found that wind turbines of contemporary design with therotor placed upwind produce very low levels of infrasound. Even quite close to theseturbines the infrasound level is far below relevant assessment criteria, including thelimit of perception." Source: Jakobsen 2005 review http://multi-science.metapress.com/content/w6r4226247q6p416/
- "With older downwind turbines, some infrasound also is emitted each time a rotor blade interacts with the disturbed wind behind the tower, but it is believed that the energy at these low frequencies is insufficient to pose a health hazard." Source: NRC 2007 http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

Shadow flicker

- "Scientific evidence suggests that shadow flicker [from the rotating blades of wind turbines does not pose a risk for eliciting seizures as a result of photic stimulation." Source: Massachusetts review http://www.mass.gov/dep/energy/wind/turbine impact study.pdf
- Shadow flicker from wind turbines... is unlikely to cause adverse health impacts in the
 general population. The low flicker rate from wind turbines is unlikely to trigger
 seizures in people with photosensitive epilepsy. Further, the available scientific
 evidence suggests that very few individuals will be annoyed by the low flicker
 frequencies expected from most modern wind turbines." Source: Oregon review
 http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf
- "Flicker frequency due to a turbine is on the order of the rotor frequency (i.e., 0.6-1.0 Hz), which is harmless to humans. According to the Epilepsy Foundation, only frequencies above 10 Hz are likely to cause epileptic seizures." Source: NRC 2007 http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

Community & social response to wind turbines

- "Wind energy developments could indirectly result in positive health impacts... if they increase local employment, personal income, and community-wide income and revenue. However, these positive effects may be diminished if there are real or perceived increases in income inequality within a community." Source: Oregon review http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf
- "Effective public participation in and direct benefits from wind energy projects (such as
 receiving electricity from the neighboring wind turbines) have been shown to result in
 less annoyance in general and better public acceptance overall." Source: Massachusetts
 review http://www.mass.gov/dep/energy/wind/turbine impact study.pdf

- "... people who benefit economically from wind turbines [are less likely to report noise annoyance, despite exposure to similar sound levels as those people who [are not economically benefiting." Source: NHMRC 2010
 http://www.nhmrc.gov.au/ files nhmrc/publications/attachments/new0048 evidence review wind turbines and health.pdf
- "Landowners... may perceive and respond differently (potentially more favorably) to
 increased sound levels from a wind turbine facility, particularly if they benefit from the
 facility or have good relations with the developer..." Source: Oregon review
 http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf
- "The level of annoyance or disturbance experienced by those hearing wind turbine sound is influenced by individuals' perceptions of other aspects of wind energy facilities, such as turbine visibility, visual impacts, trust, fairness and equity, and the level of community engagement during the planning process." Source: Oregon review http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf
- "Wind energy facilities... can indirectly result in positive health impacts by reducing emissions of [green house gases and harmful air pollutants, and... Communities near fossil-fuel based power plants that are displaced by wind energy could experience reduced risks for respiratory illness, cardiovascular diseases, cancer, and premature death." Source: Oregon review http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf
- "The environmental and human-health risk reduction benefits of wind-powered electricity generation accrue through its displacement of electricity generation using other energy sources (e.g., fossil fuels), thus displacing the adverse effects of those other generators." Source: NRC 2007
 http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf
- "Community engagement at the outset of planning for wind turbines is important and
 may alleviate health concerns about wind farms. Concerns about fairness and equity
 may also influence attitudes towards wind farms and allegationsabout effects on
 health. These factors deserve greater attention in future developments." Source:
 Ontario CMOH Report
 http://www.health.gov.on.ca/en/public/publications/ministry reports/wind turbine/w
 ind turbine.pdf
